

Java Platform, Enterprise Edition (Java EE) - Advanced

24 Hours

About the Course

The course is designed to enable the participants who are familiar in building applications using Java Platform, Enterprise Edition (Java EE) to learn advanced Java EE technologies including frameworks such as Spring MVC, Java Server Faces, Hibernate

As a prerequisite, it is expected that the participants of this course are already familiar with the concepts of Java Platform, Enterprise Edition (Java EE) (as enumerated in ' Java Platform, Enterprise Edition (Java EE)' training course profile of QValue Services)

Course Objectives

After attending this course, the participants will be able to:

- Understand the concepts of Java Message Service (JMS)
- Learn Java Webservices
- Learn the advanced concepts of applying Java frameworks
- Create Java based web application using Java frameworks

Course Contents

The workshop would cover the topics as noted below. There would be hands on sessions at appropriate junction points to elaborate and understand the concepts.

- Java Message Service
- Java Webservices
- Advanced Technologies – Frameworks
 - Spring MVC
 - Java Server Faces
 - Hibernate
- A case study oriented Project to build a Java EE application using frameworks
